

ATTENTION :PILOTS

Potential conflict with Palomar airport arrivals

Jet arrivals to Palomar airport and other jet traffic present a potential collision hazard

The routing approximates the red lines below but aircraft may be radar vectors on different paths.

ATC may operate these arrivals at or above 7300 ft MSL (the minimum vectoring altitude)

To advise ATC when non-transponder equipped gliders may be operating above 7000 FT

Call SoCal approach at **(858) 537-5946**

“I’m calling from Warner Springs Gliderport. We’ll be having non-transponder equipped gliders in the area up to _____ feet until _____ o’clock”

In-flight frequency: 132.2
